

URHE_CF

High-efficiency heat recovery unit with cooling circuit without an external unit. Air flow rates from 1,000 to 3,300 m³/h.

R410A

Features

The units from the URHE_CF series represent a high-efficiency solution to satisfy the temperature and humidity comfort and ventilation requirements in air conditioning systems that serve public spaces and the commercial sector, such as offices, bars, restaurants, etc.

The URHE_CF units are particularly efficient units in that they use a high yield cross flow plate heat exchanger of high capacity combined with a heat pump cooling circuit operating with refrigerant R410A.

The use of a high yield cross flow heat recovery unit permits a significant reduction in the operating time of the cooling circuit throughout the year, thereby reducing to the minimum the electrical energy consumption.

The small unit dimensions allow for easy installation even in suspended ceilings, allowing excellent accessibility for the maintenance of all the internal components.

The numerous accessories available on request, for example the high-efficiency compact filters, the hot water coil or the silencers, complete the functions of the unit, which is usually combined to an air conditioning system.

VERSIONS

- 4 sizes available in horizontal configuration for ground or suspended ceiling installation.
- Unit complete with temperature controller and ready for installation.

STRUCTURE AND PANELS:

- Structure in aluminium profiles with glass fibre reinforced nylon corner pieces.
- Sandwich panel 25 mm thick with galvanised steel for the internal surface, prepainted for the external surface with injected polyurethane insulation (density 42 kg/m³).

HEAT RECOVERY:

- Cross flow plate heat exchanger in aluminium optimised to ensure high outputs.

PLEATED FILTERS:

- Class G4, 80% gravimetric efficiency according to EN 779, thickness 48 mm, located before the recovery unit both in the supply and return air flow.

CENTRIFUGAL FANS:

- Forward curved impellers with directly coupled high static pressure motor. The air flow rate is maintained constant by the use of an electronic controller.

COOLING CIRCUIT:

- Heat pump with refrigerant R410A, complete with high-efficiency low noise rotary or scroll compressors (depending on size), 4 way cycle reversing valve, evaporator coil, condenser coil, liquid receiver, thermostatic valve, liquid sight glass, dehydrator filter, high pressure manostat, low pressure manostat, safety

valve, bypass valve (for the smaller sizes).

ELECTRICAL PANEL:

- The unit is provided with an electrical panel complete with power and control cross-section (including the control for the 3 way valve for the supplementary hot water coil and associated actuators), ensuring the control of all the cooling circuit functions. Included are: NTC return air temperature sensor, external air temperature sensor, dampers and actuators in the free-cooling version, manostat on the flow filter. Supplied loose is a remote control terminal for automatic control of the unit.

ENVIRONMENTALLY FRIENDLY:

- Through the applied technology and the use of ozone friendly refrigerant R410A, the URHE_CF series is environmentally friendly. R410A is a refrigerant with high thermodynamic efficiency and this, together with the use of scroll compressors, allows for reduced CO₂ emissions.

Accessories

- **MBCH** hot water coil module
 - **MBCX** electric coil module
 - **FCT** high-efficiency compact filters F7
 - **BIT** base for floor mounting
 - **BIM** base for floor mounting for additional modules
- **TPE** roof for external installation
 - **TPM** roof for external installation of additional modules
 - **FCH** free-cooling kit
 - **RS485** board RS485
 - **MSS** n° 1 silencer splitter module
- **TPMSS** roof for silencer splitter module
 - **FGE** circular flanges

(1) Fan power supply: 230V; nominal air flow rate; without accessories;

(2) Fresh air flow rate equal to exhaust air flow rate; incoming external air temperature -5°C, 80% UR; Room temperature 20°C, 50% UR

(3) Performance referring to: fresh air flow rate equal to exhaust air flow rate; incoming external air temperature 34°C, 50% UR; room temperature 26°C, 50% UR.

(4) Performance referred to: inlet/outlet water temperature 70/60°C; at conditions 2) with compressor operating

(5) Performance referred to: inlet/outlet water temperature 45/40°C at conditions 2) with compressor operating

Sound power level of the flow fan not ducted with useful static pressure equivalent to 0 Pa.

(1) Fan power supply: 230V; nominal air flow rate; without accessories;

Cooling

(2) Operating conditions: return air 26°C 50%, external air 34°C 50%;

Heating

(3) Operating conditions: return air 20°C 50%, external air -5°C 80%;

(4) This value offers an indication of the capacity produced by the unit net of the capacity used to bring the external air conditions to neutral values (specifically, 20°C with 50% UR in winter and 26°C with 50% UR in summer)

(5) At 1 m distance in free field with ducted connections.

(6) Inlet/outlet water temperature 70/60°C. Compressor operating. Operating conditions: return air 20°C 50%, external air -5°C 80%;

(7) Inlet/outlet water temperature 45/40°C. Compressor operating. Operating conditions: return air 20°C 50%, external air -5°C 80%;
